

Safe, Cost-effective, Reusable

Safe and efficient handling of chlorinated solvents

IPI supplies complete solutions for safe handling, dispensing, storing and transport of chlorinated solvents.

IPI's packaging and dispensing system for chlorinated solvents allows you to meet the legislative requirements, by taking into account all **health and safety related issues to protect both** man and the environment and to ensure the responsible use of chemical products.

- Stainless steel containers from 10 – 1000 litres from world renowned Schaefer GmbH.
- Containers fitted with the RSV/DV Valve dispensing system, available with a range of seal materials for different chlorinated solvents.
- PU coated stainless steel containers, which are easier to handle and can be customised with your brand image or company logo.
- Double-walled stainless steel containers for additional safety and security.

Application

Designed for use with the following chlorinated solvents in a wide range of industry applications:

- Methylene chloride: pharmaceuticals, chemical processing, aerosols, food extraction, urethane foam blowing and surface treatment including paint stripping;
- Perchloroethylene: dry cleaning and metal cleaning;
- Trichloroethylene: metal cleaning and speciality adhesives

Key benefits

SAFE

Prevents leaks, emissions and spillage, offering the safest dispensing system to protect man and environment from pollution and contamination with hazardous chemicals. It prevents tampering and unauthorised refilling or emptying of the containers.

SAVINGS

Saves storage space thanks to the compact design and the special stacking edge of the container.

EASY TO HANDLE

The container's compact design and the ergonomic RSV/DV valves make it easy to handle, store and transport.

ROBUST AND RETURNABLE/ REUSABLE SYSTEM

The IPI system is designed for multiple use, thus saving disposal costs and new equipment purchase costs over many years.
